

Machine Design

3D engineering, simulation and machine concept design services.

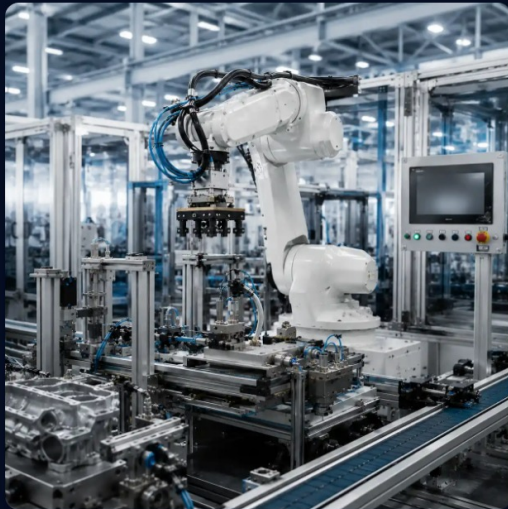

3D CAD & SIMULATION

Machine Design Service

We provide professional 3D machine design for your existing concept or production need. Our engineering team works on SolidWorks, AutoCAD and Inventor, providing realistic simulation and strength analysis.

Design files are delivered to you; production can be done by you, or we can complete it with our custom-machine-manufacturing service.

Get Project Quote

PROCESS

Design Stages

01

Brief & Meeting

Needs and target production analysis.

02

Concept Sketch

Hand drawings and preliminary design.

03

3D Modelling

Building a detailed CAD model.

04

Simulation

FEA, motion and strength analysis.

05

Technical Drawings

2D drawings and BOM for production.

06

Revision & Delivery

Customer approval and file handover.

3D CAD

SolidWorks, Inventor, AutoCAD.

FEA Simulation

Strength and fatigue analysis.

Motion Analysis

Collision and cycle check.

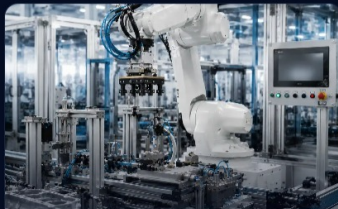

Full Documentation

2D + BOM + assembly guide.

OTHER SERVICES

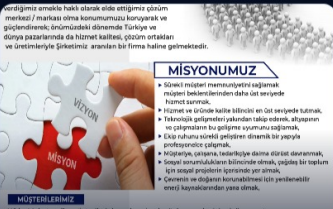

Related Services

SERVICE

Machine Manufacturing

We manufacture high quality, durable and efficient machines for the industrial mechatronic sector.

SERVICE

Robotic Applications

As an ABB system integrator: robotic bin picking, palletizing, welding, assembly, machine tending and material...

SERVICE

Spare Parts Production

High precision spare parts production on computer-aided CNC machines.
